

GLOBAL TARPSEAL RB

The only membrane that bonds to poly tarp – and stays bonded.

THE PROBLEM

Standard sealants don't grip polyethylene (PE) or polypropylene (PPE) tarp. They lift, peel, or fail at the seam within a season. A leaking tarp means moisture in your grain and fumigation that can't hold – costing you in retreatment, grain loss, and increasingly resistant insects.

THE SOLUTION

Tarpseal RB is rubber modified specifically for PE and PPE tarp surfaces. That rubber modification gives it the grip and flexibility that standard membranes can't achieve on poly – staying bonded through the expansion, contraction, and movement of a working tarp.

USE IT ON

- ▲ PE and PPE grain cover tarps
- ▲ Tarp seams – new or repaired
- ▲ Fumigation tarps
- ▲ Hay and silage covers
- ▲ Grain bunker covers
- ▲ Any poly surface needing a gas-tight seal

WHY IT WORKS WHERE OTHERS DON'T

- ✓ **Rubber modified.**
Engineered to grip the slick, non-porous surface of poly tarp – standard acrylics can't do this.
- ✓ **Stays bonded under movement.**
Minimum 250% elongation. Flexes when the tarp moves without breaking the seal.
- ✓ **Gas-tight.**
Holds fumigant in. Keeps insects and moisture out.
- ✓ **Safe and solvent free.**
Non-hazardous. Safe around grain and food storage.
- ✓ **Easy to apply.**
600 ml sausages for seam work with a mastic dispenser. Pails for brush application on larger areas.

Note: For PVC tarps, use Glo-Mastic – it adheres well to PVC surfaces and seams.

PACK SIZES

15 litre pails

600 ml sausages
(electric or manual
mastic dispenser)
